

Genasys™ PANIC & I AM OK

One Click Emergency Response
& Event Activation

Higher Level of Safety for Individuals

The Genasys Panic App enables individuals to instantly send an emergency notification to organizational security contacts with a push of a button. Lone and remote workers can report accidents and critical events from the field and transmit their location data and status.

Enhanced Security for Organizations

During a critical event, Genasys empowers organizations to send status checks to workers that may be in danger and receive OK/NOT OK status updates from them. This capability also provides the status of workers traveling to a specific destination and navigates workers to safety during an emergency. Guard Mode provides security personnel a set of actionable alerts.

Incident Specific Responses

Users experiencing an emergency send alerts through mobile phones or desktops, instantly notifying security personnel of their location and status. Security personnel receive alerts on their mobile devices or desktops, respond to the user and deploy resources specific to the incident.

Real Time 2-Way Communication During Emergency Situations

After users activate PANIC alerts or respond to I AM OK status checks, security teams and users can exchange messages, video and images via desktop or mobile app regarding incident severity, affected areas and workers at risk.
